Dear Hiring Manager,

I will be graduating in May 2020 from the University of Michigan with a B.S.E. in computer science and I am excited about joining the workforce. I am interested in pursuing a career in healthcare technology in the area of biotech. The intersection of healthcare and technology are critical for growth and success in this industry and I would like to be a part of it. I believe that my combination of problem-solving skills, programming expertise and my passion for this field uniquely qualify me for this path.

Over the last two years, I have completed two internships, one in the finance sector and one in digital retail web development. I learned the importance of accurate information, problem-solving discipline, strong programming skills as well as how crucial progressive technology is in today's business market.

My inspiration to work in biotech began 9 years ago with the American Cancer Society's Relay for Life. As a member of the event's Planning Committee for the University of Michigan, the second-largest Relay for Life in the country, I was exposed to a wealth of incredibly powerful and compelling information. Doctors and researchers regularly described the impact of new technologies and their impact on oncology research and cures. This exposure inspired me to pursue opportunities in healthcare where I could leverage my skills.

I am dedicated to gaining practical knowledge in this field and excited by the opportunity to do so at your organization. I look forward to hearing from you soon.

Sincerely,

Elise Minto
